

Here's a clear table comparing **one-time activities**, **day-to-day activities**, and **years of experience required** for each role:

Role	One-Time Activities (Project/Setup Level)	Day-to-Day Activities (Ongoing)	Experience Required
Java Architect	- Define Java application architecture.- Choose frameworks, libraries, and tech stack.- Design application security, scalability, and performance guidelines.- Create high-level design documents.	- Review code and design.- Ensure architectural compliance.- Guide developers.- Conduct code and design reviews.- Resolve technical roadblocks.	10+ years
Technical Architect	- Define solution architecture at module/component level.- Select tools, technologies.- Perform initial PoCs.- Create technical design documents.	- Review and improve existing architecture.- Support development teams.- Solve technical challenges.- Optimize system performance.- Enforce technical best practices.	8-12 years
Solution Architect	- Create solution blueprint for client/business needs.- Map business requirements to technical solutions.- Decide integration strategies.- Prepare solution presentations.	- Collaborate with business and technical teams.- Validate that solutions align with business goals.- Handle change requests.- Support presales and proposals.	12-15+ years
Enterprise Architect	- Define enterprise-wide architecture strategy.- Create enterprise-level reference architecture.- Set IT standards and policies.- Develop long-term technology roadmap.	- Oversee IT landscape alignment with business goals.- Guide solution/technical architects.- Approve major architectural changes.- Engage in enterprise governance processes.	15+ years

Key Differentiation:

- **Java Architect:** Focused on Java-based application architecture.
- **Technical Architect:** Focused on technical implementation details across components/modules.
- **Solution Architect:** Bridges business needs and technical solutions, across technologies.
- **Enterprise Architect:** Focused on enterprise-level IT strategy and governance.
