

Here's a complete and updated list of **DigitalOcean services**, categorized into **Built-in Free** and **Premier Paid** tiers, presented in **table format** with **suggested use cases**:

DigitalOcean Services Table

Category	Service Name	Free / Paid	Description	Suggested Use Case
Compute	Droplets	Paid	Scalable virtual machines (VMs)	Deploying web apps, APIs, staging/production environments
	App Platform	Free & Paid	PaaS for deploying code directly (supports autoscaling)	Fast deploy of static sites, containerized apps, and APIs
	Functions	Free & Paid	Serverless computing based on events (FaaS)	Event-driven apps, microservices, cron jobs
Kubernetes	Kubernetes (DOKS)	Paid	Managed Kubernetes clusters	Deploying containerized microservices at scale
Storage	Spaces	Paid	Object storage with CDN	Host static files, media, backups
	Volumes	Paid	Block storage volumes for Droplets	Attach extra persistent storage to VMs
	Backups	Paid	Automatic weekly backups for Droplets	Recovery from accidental deletion
	Snapshots	Paid	On-demand images of Droplets and volumes	Create reusable base images or recovery points
Databases	Managed Databases (PostgreSQL, MySQL, Redis)	Paid	Fully managed databases	High availability databases without manual setup

Networking	Load Balancers	Paid	Distributes traffic across multiple Droplets	Improve availability and performance of web apps
	VPC (Virtual Private Cloud)	Free	Private networking between your resources	Secure communication between resources
	Floating IPs	Free	Static IPs that can be reassigned	High availability & failover setup
	Firewalls	Free	Define inbound/outbound rules	Security and access control for Droplets
	DNS Management	Free	Host and manage DNS records	Domain setup, subdomains, email records
Monitoring & Insights	Monitoring & Alerts	Free	Resource usage metrics and alerting	Track CPU, memory, disk, and set thresholds
	Uptime Monitoring	Free	Ping-based uptime tracking	Basic uptime checks for websites and services
	Logging (via integrations)	External / Paid	Integrated via Logtail or third-party tools	App logs, system monitoring
Developer Tools	API Access	Free	RESTful API for automating infrastructure	CI/CD pipelines, auto-scaling, infrastructure as code
	CLI (doctl)	Free	Command-line tool for interacting with DO services	Local infrastructure management
	Terraform Provider	Free	Infrastructure-as-code integration	Automate resource provisioning
	GitHub Integration (App Platform)	Free	Auto-deploy from GitHub	Continuous deployment workflows

Security	SSH Key Management	Free	Manage access to Droplets	Secure login without passwords
	2FA (Two-Factor Authentication)	Free	Enhanced login security	Account protection
Billing & Support	Team Accounts	Free	Collaborate with multiple users on a project	Teams, startups, agencies
	Usage Dashboard	Free	Track resource usage and billing	Budgeting and usage analysis
	Premium Support	Paid	SLA-based faster support (Business or Premium tiers)	Mission-critical apps and enterprise support
Marketplace	1-Click Apps	Free (Pay for VM)	Pre-configured software stacks	Launch WordPress, Docker, LAMP, MEAN, etc. instantly
	Partner Apps (e.g., Logtail, Aiven)	Paid	Third-party SaaS apps offered via marketplace	Advanced logging, DB hosting, analytics

Notes:

- **Free Tier Limits:**
 - App Platform offers a **Free Starter Tier** with 3 static sites.
 - **Functions** has free monthly invocation limits.
 - Some services (e.g., DNS, VPC, Firewalls) are always free.
- **Paid Services** are billed per usage (hourly/monthly), with low-cost entry points for most resources.
- **Premium Support Plans** start at extra cost beyond your resource usage.

Common Use Case Example:

Use Case	DigitalOcean Services Used
Deploying a PHP/Laravel Web App	Droplets (Compute), Managed MySQL (Database), Spaces (for assets), VPC, Firewalls, Load Balancer
Deploying a Static Site	App Platform Free Tier, GitHub Integration, CDN via Spaces or Cloudflare
Microservices with CI/CD	DOKS (Kubernetes), Container Registry, Monitoring, API, GitHub/Terraform integration

Would you like me to convert this into **PDF**, **Excel**, or an **Architectural Diagram** for your project/resume?
