Below is a **real-time AWS daily-use "keywords" master table** that developers/DevOps/Cloud engineers commonly speak in projects — and **each keyword is mapped to its AWS service**, with **real-world use cases + examples**.

✅ AWS Daily/Common Services — Keywords Master Table (Real-Time)

AWS Service	Daily/Common Keywords (Most Used in Projects)	Real-time Use Cases	Real Example
IAM	User, Role, Policy, Permission, Inline Policy, Managed Policy, Trust Policy, MFA, AssumeRole, Access Key, Secret Key, Identity Provider, SSO	Access control & security	"EC2 app needs access to S3 → attach role with S3 policy"
VPC	CIDR, Subnet, Public Subnet, Private Subnet, Route Table, Internet Gateway (IGW), NAT Gateway, NACL, Security Group, VPC Peering, Transit Gateway, VPC Endpoint, ENI	Networking foundation	"Database in private subnet, API in public subnet"
EC2	Instance, AMI, Key Pair, Security Group, EBS, User Data, Auto Scaling, Launch Template, Elastic IP, Spot, On-Demand, Reserved, Placement Group	Compute servers	"Host Spring Boot app on EC2 + Nginx reverse proxy"

EBS	Volume, Snapshot, IOPS, Throughput, GP3, Provisioned IOPS, Attach/Detach	Persistent disk for EC2	"Database storage for EC2 MySQL"
S3	Bucket, Object, Prefix, ACL, Bucket Policy, Versioning, Lifecycle, Storage Class, Glacier, SSE-S3, SSE-KMS, Presigned URL	Storage for app files	"Upload documents/images; store logs & backups"
CloudFront	Distribution, Cache Behavior, Origin, TTL, Invalidation, Edge Location, OAI/OAC	CDN for faster delivery	"React frontend cached via CloudFront + S3"
Route 53	Hosted Zone, Record Set, A record, CNAME, Alias, Routing Policy, Health Check	Domain + DNS routing	"api.company.com → ALB"
ELB (ALB/NLB)	Target Group, Listener, Rules, Health Check, Sticky Session, Path-based routing, TLS termination	Load balancing	"/api routes to backend, /admin routes to admin app"
Auto Scaling	Scaling Policy, Desired Capacity, Min/Max, Scale-out,	Auto scaling compute	"Traffic spike → automatically add EC2 instances"

	Scale-in		
ECS	Task, Service, Cluster, Fargate, Task Definition, Container	Run containers	"Deploy Docker microservices using ECS Fargate"
EKS	NodeGroup, Pod, Deployment, Service, Ingress, Cluster	Kubernetes on AWS	"Production k8s cluster for microservices"
Lambda	Function, Trigger, Runtime, Timeout, Memory, Layers, Cold Start, Handler	Serverless compute	"Image resizing on upload to S3"
API Gateway	REST API, HTTP API, Stages, Throttling, Usage Plan, API Key, Integration	Expose APIs	"Public backend endpoint for mobile app"
DynamoDB	Table, Partition Key, Sort Key, GSI, LSI, Provisioned, On-demand, Streams	NoSQL database	"User session store & fast lookups"
RDS	DB Instance, Multi-AZ, Read Replica, Subnet Group, Parameter Group, Backup Window	Managed relational DB	"Production PostgreSQL for ERP/CRM system"
Aurora	Cluster, Writer, Reader,	High performance DB	"High-scale app uses Aurora MySQL"

	Auto scaling storage, Global DB		
ElastiCache	Redis, Memcached, Cluster Mode, TTL, Cache hit/miss	Caching & session store	"Redis for OTP/session caching"
SQS	Queue, Message, Visibility Timeout, DLQ, FIFO, Standard Queue	Message queue	"Order service pushes tasks for email service"
SNS	Topic, Subscription, Publish, Fan-out	Pub/Sub notifications	"Broadcast events to many services"
EventBridge	Event Bus, Rule, Pattern, Schedule	Event-driven apps	"Trigger workflow when payment succeeded"
Step Functions	State Machine, Task, Choice, Retry, Parallel	Orchestration	"Order → payment → invoice → shipment flow"
CloudWatch	Logs, Metrics, Alarms, Dashboards, Log Groups, Log Streams	Monitoring	"CPU > 80% alarm triggers scaling"
CloudTrail	Event History, Management Events, Data Events	Audit tracking	"Who deleted S3 bucket? check CloudTrail"
AWS Config	Config Rule, Compliance	Governance & compliance	"Ensure S3 buckets are not public"

KMS	CMK, Key Policy, Encrypt/Decrypt, Rotation	Encryption keys	"Encrypt secrets + S3 objects + RDS"
Secrets Manager	Secret, Rotation, ARN	Store secrets	"DB password stored & auto rotated"
SSM (Systems Manager)	Parameter Store, Run Command, Session Manager, Patch Manager	Ops automation	"Login to EC2 without SSH using Session Manager"
ECR	Repository, Image, Tag, Scan	Container registry	"Push docker image for ECS deployment"
CodeCommit	Repo, Branch, Commit	Git on AWS	"Host private code repository"
CodeBuild	Buildspec, Artifact, Build Project	Build automation	"Build Java + run tests + create jar"
CodeDeploy	Deployment Group, Blue/Green, Rolling update	Deploy automation	"Deploy to EC2 without downtime"
CodePipeline	Pipeline, Stages, Actions	CI/CD automation	"Commit → build → test → deploy"
CloudFormation	Stack, Template (YAML/JSON), Parameters, Outputs	Infrastructure as Code	"Provision VPC + EC2 + RDS with template"
CDK	Construct, Stack, Synth	IaC using code	"Create infra using TypeScript CDK"
SageMaker	Training Job, Endpoint, Notebook	ML deployment	"Host ML prediction endpoint"

Cognito	User Pool, Identity Pool, JWT, OAuth2	Authentication	"Login/signup for mobile application"
WAF	Web ACL, Rule, Rate limit, IP set	Web security	"Block bots + SQL injection attempts"
Shield	DDoS protection	DDoS	"Protect public ALB/API from DDoS"
Organizations	Accounts, SCP, OU	Multi-account governance	"Dev/Test/Prod separation with policies"
Billing/Cost Explorer	Budgets, Cost allocation tag, Savings Plan	Cost management	"Alert if cost exceeds ₹10,000/month"

✅ "Most-used AWS Keywords" (Fast Cheat Section)

⭑ Networking daily keywords

- CIDR, subnet, IGW, NAT, route table, SG, NACL, endpoint, peering, transit gateway

⭑ Security daily keywords

- IAM role, least privilege, trust policy, MFA, KMS encryption, secrets rotation, CloudTrail audit

⭑ Compute daily keywords

- EC2, AMI, autoscaling, target group, health check, spot instance, user data

⭑ Storage daily keywords

- bucket, object, versioning, lifecycle, presigned url, storage class, encryption

⭑ DevOps/Deployment daily keywords

- pipeline, buildspec, artifact, rolling deploy, blue-green, IaC stack

⭑ Monitoring daily keywords

- log group, metrics, alarm, dashboard, trace, audit events

If you want, I can also provide:
✅ **PDF cheat-sheet** (AWS keywords + services)
✅ **Interview version** (AWS keywords asked in interviews)
✅ **AWS keywords for Java + Spring Boot real-time projects**
