Here is a breakdown of **one-time** and **day-to-day** activities for a **Cloud/DevOps/Linux Engineer** using the AWS services you've listed.

✅ One-Time Activities vs □ Day-to-Day Activities

Category	Service	One-Time Activities (✅)	Day-to-Day Activities (□)
1. Compute	EC2	✅ Launch EC2 instances with appropriate AMIs, VPCs, security groups ✅ Configure auto-scaling and ELB ✅ Set up SSH keys and IAM roles	□ Monitor CPU/memory usage □ Patch/update OS □ Restart/debug EC2s □ Log review and backup
2. Storage	S3	✅ Create S3 buckets ✅ Define bucket policies & lifecycle rules ✅ Enable versioning or encryption	□ Upload/download files □ Monitor storage cost □ Review access logs □ Manage file retention
3. Databases	RDS / DynamoDB	✅ Provision RDS instances or DynamoDB tables ✅ Configure backup & retention ✅ Setup replication/multi-AZ	□ Monitor DB health/performance □ Adjust instance sizes or IOPS □ Tune queries □ Review logs & slow queries
4. Networking	VPC / Direct Connect	✅ Design and create VPC, subnets, route tables, NAT gateways ✅ Setup VPN/Direct Connect	□ Monitor traffic flow/logs □ Update route tables or security groups □ Troubleshoot network connectivity
5. Serverless	Lambda / API Gateway	✅ Create Lambda functions with proper triggers ✅ Set up API Gateway endpoints and stages	□ Monitor Lambda logs and errors (CloudWatch) □ Tune timeouts or memory □ Debug failed executions

6. Containers	ECS / EKS	✅ Cluster provisioning (EKS) ✅ Task Definitions / Service Setup (ECS) ✅ Setup IAM roles and container registry	☐ Monitor pod/task health ☐ Roll out deployments ☐ Manage container logs ☐ Troubleshoot failures
7. IAM	IAM	✅ Create IAM users, groups, roles, and policies ✅ Set password policies ✅ Configure MFA	☐ Rotate credentials ☐ Audit permissions ☐ Respond to access requests ☐ Monitor suspicious activity
8. Monitoring & Logging	CloudWatch / CloudTrail	✅ Setup alarms, dashboards, metric filters (CloudWatch) ✅ Enable CloudTrail logs for audit	☐ Investigate alerts ☐ Review logs for anomalies ☐ Adjust thresholds ☐ Daily health checks
9. CI/CD Tools	CodePipeline / CodeDeploy	✅ Create pipelines ✅ Configure deployment groups, hooks, artifacts	☐ Monitor deployments ☐ Troubleshoot build/deploy failures ☐ Make minor pipeline tweaks ☐ Ensure pipeline hygiene

---

Summary

- **One-time activities** focus on **initial setup/configuration**.
- **Day-to-day activities** focus on **monitoring, maintenance, optimization, and debugging**.

Would you like the same table in **PDF format** or customized for **Azure** or **GCP** as well?

Here is the **One-Time vs Day-to-Day Activities Table** for both **Azure** and **GCP**, covering services similar to the AWS list you provided.

Azure: One-Time vs Day-to-Day Activities

Category	Azure Service	✅ One-Time Activities	☐ Day-to-Day Activities
Compute	Azure Virtual Machines	✅ Create VMs, configure sizes and images ✅ Assign NSGs, storage, and availability sets	☐ Monitor CPU/memory ☐ Apply updates via Update Management ☐ Restart/debug VMs
Storage	Azure Blob Storage	✅ Create storage accounts and containers ✅ Configure lifecycle management ✅ Set access tiers	☐ Monitor usage and costs ☐ Manage access via SAS ☐ Review logs
Databases	Azure SQL Database, Cosmos DB	✅ Create DB instances ✅ Setup geo-replication & failover ✅ Configure firewall rules	☐ Monitor DTU/throughput ☐ Query performance tuning ☐ Backup and integrity checks
Networking	Azure VNet, ExpressRoute	✅ Create VNets, subnets, NSGs ✅ Configure ExpressRoute ✅ Setup DNS/private endpoints	☐ Monitor traffic with NSG flow logs ☐ Update peering/routing ☐ Troubleshoot latency
Serverless	Azure Functions, API Management	✅ Develop and deploy Functions ✅ Configure triggers and scaling ✅ Create APIs and policies	☐ Monitor failures in App Insights ☐ Debug timeouts/errors ☐ Tune resource limits
Containers	Azure Kubernetes Service (AKS), Container Instances	✅ Setup AKS clusters ✅ Install ingress controllers, configure namespaces	☐ Monitor pods/nodes ☐ Apply rolling updates ☐ Debug Helm charts/logs

		✅ Configure ACR & role bindings	
IAM	Azure Active Directory, RBAC	✅ Create users/groups ✅ Define roles and assign scopes ✅ Enable Conditional Access & MFA	☐ Review access logs ☐ Audit role assignments ☐ Handle access requests
Monitoring	Azure Monitor, Log Analytics	✅ Setup Log Analytics workspace ✅ Create alerts & dashboards ✅ Enable diagnostics	☐ Investigate alerts ☐ Tune metrics/log queries ☐ Optimize alert rules
CI/CD	Azure DevOps (Pipelines) / GitHub Actions	✅ Create release pipelines ✅ Define build triggers and artifacts ✅ Configure agents & environments	☐ Monitor failed runs ☐ Update pipelines for code changes ☐ Handle environment issues

---

GCP: One-Time vs Day-to-Day Activities

Category	**GCP Service**	✅ **One-Time Activities**	☐ **Day-to-Day Activities**
Compute	Google Compute Engine	✅ Create VM instances ✅ Assign firewall rules and static IPs ✅ Set startup scripts	☐ Monitor instance health ☐ Resize instances ☐ Apply OS patches
Storage	Google Cloud Storage	✅ Create buckets ✅ Configure access control (IAM, ACL) ✅ Enable object versioning/lifecycle	☐ Monitor storage cost ☐ Manage bucket contents ☐ Review access logs

Databases	Cloud SQL, Bigtable, Firestore	✅ Provision DBs ✅ Configure HA and backups ✅ Setup IAM & IP filtering	☐ Monitor connections/performance ☐ Backup validation ☐ Tune queries
Networking	VPC, Cloud Interconnect	✅ Create VPC, subnetworks, firewall rules ✅ Setup routes and VPN ✅ Configure DNS zones	☐ Monitor traffic/logs ☐ Adjust firewall rules ☐ Troubleshoot latency issues
Serverless	Cloud Functions, API Gateway	✅ Deploy functions with triggers ✅ Configure memory/timeouts ✅ Setup secured APIs	☐ Monitor logs via Cloud Logging ☐ Debug function errors ☐ Tune scaling policies
Containers	Google Kubernetes Engine (GKE), Cloud Run	✅ Setup GKE cluster ✅ Configure IAM and namespaces ✅ Deploy containers via YAML or Helm	☐ Monitor pod health/logs ☐ Apply deployments/updates ☐ Autoscaling adjustments
IAM	IAM, Identity-Aware Proxy	✅ Create IAM policies ✅ Setup roles and permissions ✅ Enable 2FA and audit logging	☐ Review IAM logs ☐ Handle permission requests ☐ Rotate service account keys
Monitoring	Cloud Monitoring, Logging	✅ Setup dashboards ✅ Create alert policies ✅ Enable audit logging	☐ Investigate incidents ☐ Tune metrics/log-based alerts ☐ Review logs daily
CI/CD	Cloud Build, Source Repositories	✅ Configure build triggers ✅ Define cloudbuild.yaml ✅ Setup deployment to GKE/App Engine	☐ Monitor build logs ☐ Fix failed builds ☐ Update build configs
