Here's a summarized table comparing **roles**, **responsibilities**, **key differences**, and **typical years of experience required** for each cloud-related job title you listed:

Job Role	Primary Responsibilities	Key Difference	Experience Required
Cloud Architect	- Design cloud infrastructure - Select appropriate cloud services - Ensure scalability, security, and cost optimization	Focused on high-level design and architecture of cloud systems	8–12 years
Cloud Operations Engineer	- Monitor and manage cloud systems - Ensure uptime, performance, and incident resolution - Automate operational tasks	More involved in day-to-day operations, maintenance, and reliability	2–5 years
Cloud Architecture Consultant	- Provide guidance on cloud architecture - Help businesses adopt and transition to cloud - Audit and improve existing cloud environments	Combines design and advisory roles; usually external consultant or senior internal role	7–10 years
Cloud Consultant	- Advise organizations on cloud strategy - Recommend services and migration plans - Sometimes manage implementation	Broader than an architect consultant, includes strategy, cost, compliance	5–8 years
Cloud Support Engineer	- Resolve cloud service issues - Provide technical support - Troubleshoot service outages and performance problems	Reactive role focused on customer or internal issue resolution	1–4 years
Cloud Analyst	- Analyze cloud usage and costs - Provide insights for optimization - Monitor KPIs and trends	Analytical role focusing on metrics, performance, and budget	1–3 years

Cloud Administrator	- Manage cloud accounts and permissions - Implement security and backups - Provision and configure cloud resources	Similar to sysadmin, but in a cloud context	2–5 years
Cloud Specialist	- Expert in a particular cloud service or platform - Provide deep technical support - Work with architects or dev teams	Niche expert or SME (e.g., networking, databases, security in cloud)	3–6 years

---

 Summary:

- **Architects/Consultants** focus on **design and strategy**.
- **Engineers/Administrators/Support** focus on **operations and implementation**.
- **Analysts** focus on **data and reporting**.
- **Specialists** are **deep technical experts** in a specific cloud domain.

Let me know if you want this tailored to AWS, Azure, or GCP roles specifically.
