Here's a detailed **table** listing **one-time activities** (mostly setup/design-level tasks) and **day-to-day activities** (ongoing operations and maintenance) for each of the listed cloud roles. This distinction helps clarify the **scope of work and responsibilities** for each title:

Job Role	One-Time Activities (Setup/Project-Based)	Day-to-Day Activities (Ongoing Operations)
Cloud Architect	- Design cloud architecture - Define cloud migration strategy - Select cloud services and tools - Setup governance policies	- Review architecture compliance - Optimize cloud costs - Guide development teams - Evaluate new cloud features
Cloud Operations Engineer	- Initial infrastructure automation setup (IaC) - Configure monitoring and alerting systems	- Monitor infrastructure health - Respond to incidents - Apply patches/updates - Manage backups and recovery
Cloud Architecture Consultant	- Assess existing infra - Recommend cloud design solutions - Provide architecture reviews	- Provide continuous guidance to clients - Review and optimize implementations - Support PoCs and pilot initiatives
Cloud Consultant	- Conduct readiness assessments - Help select suitable cloud platforms - Define migration roadmap	- Support ongoing client issues - Deliver periodic reports - Assist in SLA improvements and service enhancements
Cloud Support Engineer	- Setup support tools and knowledge base - Understand client's cloud environment	- Troubleshoot issues - Provide Tier 1/2/3 support - Escalate issues to cloud vendors - Monitor service requests
Cloud Analyst	- Design reporting dashboards - Define KPIs and metrics - Configure logging and analytics tools	- Analyze usage trends - Provide cost and performance reports - Recommend optimizations based on analysis
Cloud Administrator	- Initial account, user, and policy setup - Configure networking, security groups	- Manage user access and roles - Monitor resource usage - Maintain configuration consistency and security compliance

Cloud Specialist	- Design specialized solutions (e.g., ML, HPC, Security) - Evaluate cloud service suitability for niche needs	- Work on specific cloud solutions daily - Keep up with service-specific updates - Troubleshoot and optimize specialized areas

Let me know if you want this categorized by AWS/Azure/GCP or by DevOps vs Non-DevOps as well.

1. Categorized by Cloud Platform: AWS / Azure / GCP

Most responsibilities are **cloud-agnostic** but vary slightly based on tools and services per platform. Here's a tailored version:

Job Role	AWS Specific Tasks	Azure Specific Tasks	GCP Specific Tasks
Cloud Architect	- Design using VPC, EC2, S3, IAM, Lambda - Use AWS Well-Architected Framework	- Design with VNet, VM, Blob, Functions, NSGs - Use Azure Architecture Center	- Use VPC, Compute Engine, Cloud Storage, Cloud Functions - Apply GCP Architecture Framework
Cloud Operations Engineer	- CloudWatch setup, CloudTrail, Auto Scaling	- Azure Monitor, Log Analytics, Update Management	- Stackdriver Logging/Monitoring, Instance Group mgmt
Cloud Architecture Consultant	- Design migration plans (e.g., AWS Migration Hub) - Security reviews (e.g., IAM, KMS)	- Azure Migrate, Azure Policy, Defender for Cloud	- GCP Migration Center, Security Command Center
Cloud Consultant	- Help with AWS Organizations, landing zone setup	- Help set up Azure Blueprints, subscriptions	- Assist with resource hierarchy, org policies
Cloud Support Engineer	- Handle cases via AWS Support tools - Debug EC2, IAM, RDS issues	- Use Azure Support Plan tools - Debug VM, NSG, AAD issues	- Use GCP Support Hub - Debug GCE, IAM, Cloud Run
Cloud Analyst	- Use AWS Cost Explorer, Athena, QuickSight	- Azure Cost Management, Workbooks	- GCP Billing, BigQuery, Data Studio

Cloud Administrator	- IAM, SCPs, Backup, S3 lifecycle mgmt	- Azure RBAC, Backup Vaults, Resource Locks	- IAM, Cloud Storage Policies, Snapshots
Cloud Specialist	- DevSecOps, HPC, or AI (e.g., SageMaker)	- ML, Security Center, Synapse	- TensorFlow, Vertex AI, DLP, BigQuery ML

---

2. Categorized by DevOps vs Non-DevOps Roles

Job Role	**DevOps Role (✔/✘)**	**Typical DevOps Responsibilities**	**Non-DevOps Responsibilities**
Cloud Architect	✔(partially)	Define CI/CD integration, IaC (Terraform/CloudFormation)	Design enterprise architecture, compliance, and high availability
Cloud Operations Engineer	✔	Automation scripts, CI/CD management, monitoring setup	Infra health checks, patching, incident response
Cloud Architecture Consultant	✘(mostly)	–	Design reviews, technical advising, client enablement
Cloud Consultant	✘	–	Business/cloud strategy, gap analysis, and vendor communication
Cloud Support Engineer	✔(partially)	Help with pipeline, config issues	Resolve access/network/resource incidents
Cloud Analyst	✘	–	Generate usage/cost reports, monitor analytics, recommend savings
Cloud Administrator	✔	Manage IaC templates, automation tools	User/resource management, service limits, tagging policies

Cloud Specialist	✔(usually)	Specialize in DevOps for AI, security, containers	Focused implementation of niche solutions
