

Here's a detailed table listing popular **remote desktop and machine connection tools** like AnyDesk, RDC, etc., along with their **purpose**, **use cases**, and **platform compatibility**:

Tool Name	Purpose	Use Cases	Platform Support
AnyDesk	Remote desktop access with high performance	Remote support, file transfer, accessing office/home PC	Windows, macOS, Linux, Android, iOS
Microsoft RDC <i>(Remote Desktop Connection)</i>	Native Windows tool for connecting to Windows machines remotely	Managing Windows servers, internal enterprise networks	Windows, macOS (limited), Android, iOS
TeamViewer	Remote support and access with cross-platform features	IT support, unattended access, remote meetings	Windows, macOS, Linux, Android, iOS, Web
Chrome Remote Desktop	Google's browser-based remote access solution	Access personal computer from anywhere using Chrome browser	Windows, macOS, Linux, Android, iOS
VNC Connect <i>(RealVNC)</i>	Virtual Network Computing for graphical desktop sharing	Lightweight remote desktop sharing within local or remote networks	Windows, macOS, Linux, Raspberry Pi
Splashtop	Secure remote access and support	Business IT support, education, accessing work PCs securely	Windows, macOS, Android, iOS
LogMeIn	Business-grade remote access	Enterprise IT support, file access, collaboration	Windows, macOS, Android, iOS
Zoho Assist	Cloud-based remote support and unattended access	IT help desk, customer support teams	Windows, macOS, Linux, Android, iOS
Parallels Access	Remote access optimized for mobile devices	Access desktop apps from tablets/phones	Windows, macOS, Android, iOS
NoMachine	High-speed remote desktop tool	Multimedia streaming, software development, remote administration	Windows, macOS, Linux
Remmina	Open-source remote desktop client for Linux	Managing multiple remote servers (RDP, VNC, SSH)	Linux, Windows (limited), BSD

DWService	Free open-source remote access via web browser	Occasional remote support and file access	Windows, macOS, Linux, Raspberry Pi
TightVNC	Free VNC-based remote desktop software	Internal network access, educational uses	Windows, Linux
RustDesk	Open-source alternative to AnyDesk/TeamViewer	Secure remote control with self-hosted option	Windows, macOS, Linux, Android, iOS

✓ Key Notes:

- ☐ **Security Features** vary: Enterprise tools (e.g., LogMeIn, Zoho Assist) offer multi-factor authentication, session recording, and logging.
- ☐ **Internet Dependency:** Tools like Chrome Remote Desktop or DWService require internet access; RDC and VNC can also work over LAN.
- ☐ ☐ **Best for IT Admins:** RDC, Remmina, and VNC-based tools.
- ☐ **Best for Mobile Access:** Parallels Access, Splashtop, TeamViewer.
