Cloud Comparison Cheat Sheet

blog.bytebytego.com

aws	Azure	Google Cloud	ORACLE CLOUD
Elastic Compute Cloud (EC2)	Virtual Machine	Compute Engine	Virtual Machine
Elastic Kubernetes Service (EKS)	Azure Kubernetes Service (AKS)	Google Kubernetes Engine (GKE)	Oracle Container Engine
Lambda	Azure Functions	Cloud Functions	OCI Functions
Simple Storage Service (S3)	Blob Storage	Cloud Storage	Object Storage
Elastic Block Store	Managed Disk	Persistent Disk	Persistent Volume
Elastic File System	File Storage	File Store	File Storage
Virtual Private Cloud	Virtual Network	Virtual Private Cloud	Virtual Cloud Network
Route 53	DNS	Cloud DNS	DNS
Elastic Load Balancing	Load Balancer	Cloud Load Balancing	Load Balancer
Web Application Firewall	Web Application Firewall	Cloud Armor	Web Application Firewall
RDS	SQL Database	Cloud SQL	ATP
DynamoDB	Cosmos DB	Firebase Realtime Database	NoSQL Database
Redshift	Synapse Analytics	BigQuery	Autonomous Data Warehouse
Elastic MapReduce	HDInsight	Dataproc	Big Data
Kinesis	Streaming Analytics	Dataflow	Streaming
SageMaker	Machine Learning	Vertex AI	Data Science
Glue	Data Factory	Data Fusion	Data Integration
EventBridge	Event Grid	Eventarc	Events
Simple Queuing Service	Storage Queues	Pub/Sub	Streaming
Simple Notification Service	Service Bus	Firebase Cloud Messaging	Notifications
CloudWatch	Monitor	Cloud Monitoring	Monitoring
CloudFormation	Resource Manager	Deployment Manager	Resource Manager
IAM	Active Directory	Cloud Identity	IAM
KMS	Key Vault	Cloud KMS	Vault

Here's a visual glimpse showing the diverse icons used across AWS, Azure, and GCP services—ideal for architecture diagrams or reference.

Symbol Sets for AWS, Azure, and GCP & Where to Get Them

Amazon Web Services (AWS)

- **Official AWS Architecture Icons** are updated quarterly (Q1, Q2, Q3) and are designed for clean, diagram-friendly use Amazon Web Services, Inc..
- AWS icons are categorized by functionality, including Analytics, Compute, Storage, Networking, Machine Learning, IoT, DevOps, Security, and more Edrawsoft.
- There are open-source alternatives (e.g. AWS Simple Icons), but they're not maintained by AWS. The official set is recommended for accuracy and updates Repost.

Microsoft Azure

- **Official Azure icons** and logos are available via the Azure Architecture Center for diagrams and documentation Microsoft Learn.
- Microsoft also provides a comprehensive symbol set (including Visio and PowerPoint stencils) via GitHub—called the Microsoft Cloud and Enterprise Symbol / Icon Set GitHub.
- There's a cheat sheet (e.g. PDF) for quick visual reference of all Azure icons DEV Community.
- Additionally, a maintained collection of Azure icons for draw.io includes categories like AI, Analytics, Compute, Security, Storage, Networking, and more GitHub.

Google Cloud Platform (GCP)

- GCP provides **official icon libraries** and sample diagrams (e.g. PowerPoint files) for architecture reference www.slideshare.netGoogle Cloud.
- There's a GitHub repository—**AwesomeLogos/google-cloud-icons**—offering an expanded zip of official GCP icons in SVG and PNG formats GitHub.
- Standalone platforms like gcpicons.com let you browse and download a wide selection of GCP service icons in SVG or PNG (~216 icons) GCP Icons.

Summary Table

Cloud Provider	Icon Set Availability
AWS	Official quarterly-updated icons, service-focused categories
Azure	Official icon set (Architecture Center + GitHub), cheat sheets, draw.io libraries
GCP	Official downloadable icons/sample diagrams, GitHub icons repository, web icon libraries

---

Tip: For building diagrams, always use the **official, regularly updated icon sets** to ensure accuracy. If you're diagramming across platforms (multicloud), tools like draw.io and EdrawMax directly support loading each provider's libraries for streamlined use.

Would you like help locating a specific icon (e.g. AWS Lambda, Azure Functions, GCP BigQuery) or assistance with diagram tools that include all three providers?
