Here is a list of **lightweight servers** that can be installed and run inside Docker containers on **Ubuntu 22.04**, commonly used for **application deployment** and **containerized environments**, presented in table format:

Lightweight Servers for Docker on Ubuntu 22.04

Server Name	Type	Use Case	Docker Image	Memory Usage	Remarks
Nginx	Web Server / Reverse Proxy	Static websites, reverse proxy, load balancer	nginx:alpine	~5–10 MB	Extremely fast and lightweight
Lighttpd	Web Server	Static and dynamic content serving	sebp/lighttpd	~10 MB	Good alternative to Nginx/Apache
Caddy	Web Server / Proxy	HTTPS auto TLS, reverse proxy	caddy:alpine	~20 MB	Auto HTTPS with Let's Encrypt
OpenResty	Web Server (Lua + Nginx)	APIs, dynamic scripting with Lua	openresty/openresty:alpine	~20–30 MB	Great for complex edge logic
uWSGI	Application Server	Python apps (Flask, Django)	tiangolo/uwsgi-nginx	~50 MB	Often paired with Nginx
Gunicorn	WSGI HTTP Server	Python apps (Flask, Django)	tiangolo/uvicorn-gunicorn-fastapi	~50 MB	Can be used standalone or behind Nginx
Uvicorn	ASGI Server	FastAPI/async Python apps	tiangolo/uvicorn-gunicorn-fastapi	~25 MB	ASGI-compatible, great for async APIs
Node.js (Express)	App Server	Node.js applications	node:alpine	~25–50 MB	Lightweight with express for APIs/web apps

Go HTTP Server	App Server	Go-based REST APIs or sites	golang:alpine	~10–20 MB	Extremely fast, minimal dependencies
Alpine-based Apache	Web Server	Classic web server	httpd:alpine	~10 MB	Lightweight version of Apache
Tomcat (Slim)	Java App Server	Java web apps (WAR)	tomcat:9.0-jdk11-openjdk-slim	~100 MB	Slimmed down for smaller footprint
Flask	Python Microframework	Python microservices	python:3.11-alpine + Flask installed	~25–30 MB	Ideal for lightweight REST APIs
H2 Database Server	Lightweight DB	Embedded Java database	Custom Dockerfile	~15 MB	Useful for dev/testing Java apps
BusyBox HTTPD	Mini Web Server	Simple file serving or local dev	busybox:latest	~1 MB	Super minimalistic web server
Rust Actix/ Rocket	Rust-based App Server	APIs in Rust	Custom build	~10–20 MB	Great performance, custom Docker builds needed

---

 Notes:

- You can pull these using docker pull with the image name shown.
- Most :alpine tagged images are ultra-lightweight (~5 MB to 50 MB).
- Ideal for **microservices**, **container orchestration**, and **CI/CD** pipelines.
- Compatible with **Docker Compose**, **Kubernetes**, etc.

Would you like a sample Dockerfile or docker-compose.yml for one of these servers?
