

If by “**ChatGPT agents**” you mean the major **agent types/modes available within ChatGPT**, rather than third-party coding agents, the practical list is below. The exact names and availability can change as ChatGPT evolves.

#	ChatGPT agent / capability	What it is used for	How to use it / prompt instruction	Example prompt
1	ChatGPT / General Assistant	General questions, explanations, writing, brainstorming, analysis	State your objective, context, constraints, and desired output	Explain Java Virtual Machine architecture in a table.
2	Agent Mode / ChatGPT Agent	Multi-step tasks that require research, website interaction, files, apps, or completing workflows	Tell the agent the goal , required actions, constraints, and expected final result. Let it execute the workflow	@agent mode research my online presence, identify relevant public websites, and summarize the results.
3	Deep Research	Comprehensive research across multiple sources	Specify the research question, scope, sources/constraints, comparison criteria, and desired report format	Deep research Java 1–26 features that improve application performance and present the results in a table.
4	Search / Web Research	Fast, current information from the web	Ask for current information and specify a date, location, website, or source when relevant	Search the web for the latest Java 26 documentation.
5	Coding Agent / Codex	Writing, debugging, refactoring, testing, and understanding software	Provide the programming language, repository/files, objective, constraints, and acceptance criteria	Analyze this Java project, identify performance problems, fix them, and explain the changes.
6	Computer Use Agent	Interacting with graphical applications and websites like a user	Describe the desired outcome and the application/site to operate; give confirmation requirements for consequential actions	Open the website, find the specified information, and prepare the results.

7	File / Document Agent	Reading, analyzing, transforming, and extracting information from uploaded documents	Upload the file and specify what to extract, analyze, compare, or produce	Analyze this PDF and list every Java feature mentioned in it.
8	Data Analysis Agent	Working with datasets, calculations, statistics, charts, and structured analysis	Provide the dataset and describe the analysis, calculations, filters, and desired visualization/output	Analyze this CSV, calculate monthly trends, and create a summary table.
9	Writing Agent	Drafting, rewriting, proofreading, translating, and improving text	Provide the source text and specify tone, audience, language, length, and purpose	Correct only the Hindi grammar without changing the meaning.
10	Image Generation Agent	Creating images, diagrams, illustrations, concepts, and visual designs	Describe subject, composition, style, dimensions/aspect ratio, and important visual constraints	Create a professional diagram showing JDK, JRE, JVM, and JIT relationships.
11	Image Editing Agent	Modifying an existing image	Upload the image and describe exactly what to remove, add, replace, or change	Remove everyone except the person on the right.
12	Voice / Conversational Agent	Real-time spoken conversation	Start Voice and speak naturally; give instructions conversationally	Explain Java garbage collection to me like a teacher.
13	Study / Learning Agent	Learning concepts interactively, practice, quizzes, and guided explanations	State your learning objective and preferred difficulty; ask it to teach progressively	Teach me prompt engineering from beginner to advanced with exercises.
14	Personalized / Memory-enabled Assistant	Maintaining useful context across conversations	Tell ChatGPT what long-term preference or workflow should be remembered when appropriate	Remember that I prefer technical comparisons in table format.

15	Tasks / Automation Agent	Reminders, recurring tasks, monitoring, and scheduled prompts	Specify what , when/how often , and any condition that should trigger notification	Every Monday morning, summarize the latest Java news.
16	Connected-App / Connector Agent	Working with connected services such as workspace data and supported apps	Connect the relevant service, then specify what information/action you need	Search my connected workspace for the latest Java performance document.
17	Custom GPT / Custom Agent	Creating a specialized assistant with persistent instructions and knowledge	Define its role, instructions, knowledge, capabilities, and expected behavior	Create a Java Performance Expert that evaluates Java code for performance issues.
18	Research + Analysis Agent	Combining web research with reasoning and synthesis	Define the question, sources, comparison framework, and final deliverable	Research all Java versions from 1 to 26 and compare performance-related features.
19	Workflow / Orchestration Agent	Breaking a large objective into multiple sequential tasks	Give the overall goal and let the agent plan stages, dependencies, and outputs	Create a complete workflow for developing and deploying a Java application.
20	Multi-tool Agent	Combining search, files, code, data, image, apps, and other capabilities	Describe the desired end result rather than micromanaging individual tools	Research the topic, analyze my uploaded files, compare the findings, and produce a final report.

Recommended prompt structure for an Agent

For complex agent tasks, this structure works particularly well:

Prompt component	What to specify	Example
Role	What the agent should act as	Act as a senior Java architect.
Objective	What you want completed	Analyze Java 1–26 performance improvements.
Context	Relevant background	The application is a high-throughput backend.
Tasks	Steps the agent should perform	Research → compare → classify → recommend.
Constraints	What it must or must not do	Use official Java documentation where possible.
Criteria	How to evaluate results	Compare latency, throughput, memory, and scalability.
Output	Exact format required	Return the result as a table.
Verification	How to validate the result	Identify uncertain or deprecated features.
Completion condition	When the task is finished	Cover every Java release from 1 through 26.

Reusable master template:

Act as a [ROLE].

Objective:

[WHAT I WANT YOU TO ACCOMPLISH]

Context:

[RELEVANT BACKGROUND]

Tasks:

1. [TASK 1]
2. [TASK 2]
3. [TASK 3]

Requirements:

- [REQUIREMENT 1]
- [REQUIREMENT 2]
- [REQUIREMENT 3]

Constraints:

- [CONSTRAINT 1]
- [CONSTRAINT 2]

Research/Tools:

- Use [WEB / FILES / CODE / CONNECTED APPS / OTHER TOOLS] where appropriate.
- Prefer [SOURCE TYPE] when accuracy matters.

Output format:

[TABLE / REPORT / CODE / CHECKLIST / PRESENTATION / ETC.]

Verification:

[HOW THE RESULT SHOULD BE CHECKED]

Completion criteria:

[WHEN YOU SHOULD CONSIDER THE TASK COMPLETE]

Important distinction: “Agent” can mean either **ChatGPT's agentic capabilities** (Agent Mode, Deep Research, Codex, etc.) or **external AI coding agents** such as GitHub Copilot, Cursor, Claude Code, Cline, OpenHands, and others. Those are separate categories.
