To deploy your **static-gym-html-css-app** on **Azure App Service** and **Azure Static Web App**, you'll follow two separate sets of steps. Below is a complete **step-by-step guide**, including **prerequisites**, **required files**, and the **directory structure** tailored to your provided layout.

Common Prerequisites

Prerequisite	Description
Azure Account	Sign up for an Azure account.
Azure CLI	Install from here.
GitHub Account	Needed for Azure Static Web Apps deployment.
Code Editor (e.g., VS Code)	To organize, preview, and edit your files.
Project Directory Structure	Organize your folders as described below.

Recommended Project Directory Structure

Organize your project like this for both deployment methods:

```
static-gym-html-css-app/
│
├── abc.css
├── aboutus.html
├── animation.html
├── Biography.html
├── browserconfig.xml
├── bs.html
├── careers.html
├── checkbox.html
├── facebook.png
├── groupcls.html
├── Home.html
├── instagram.png
├── location.html
├── membership.html
├── mempolicy.html
├── navprac.html
├── offers.html
├── oneday.html
├── practices.html
├── PT.html
├── terms.html
```

```
├── twitter.png
├── README.md
│
├── favpack/
│   └── (favicon-related files...)
│
├── darshan/
│   ├── abc.css
│   ├── Biography.html
│   ├── facebook.png
│   ├── gym2.jpg
│   ├── instagram.png
│   ├── membership.jpg
│   ├── logo master.gif
│   ├── groupcls.html
│   ├── favpack/
│   │   └── (favicon files again)
│   └── ...
│
└── images/
    └── (all image files...)
```

Deployment to Azure App Service (Steps)

Step-by-Step

1. **Zip the folder**
    - Zip the full static-gym-html-css-app folder.
2. **Login to Azure**
3. az login
4. **Create a Resource Group (if not exists)**
5. az group create --name myResourceGroup --location eastus
6. **Create an App Service Plan**
7. az appservice plan create --name myPlan --resource-group myResourceGroup --sku FREE
8. **Create the Web App**
9. az webapp create --resource-group myResourceGroup --plan myPlan --name <your-unique-app-name> --runtime "NODE|18-lts"
10. **Deploy the Zip**
11. az webapp deployment source config-zip \
12. --resource-group myResourceGroup \
13. --name <your-unique-app-name> \
14. --src static-gym-html-css-app.zip
15. **Access App**
16. https://<your-unique-app-name>.azurewebsites.net/Home.html

---

Deployment to Azure Static Web App (Steps)

Step-by-Step via GitHub + Azure Portal

1. **Push your code to GitHub**
   - Create a GitHub repo
   - Push the static-gym-html-css-app/ folder (make sure Home.html is root index or rename it).
2. **In Azure Portal**
   - Go to **"Static Web Apps"**
   - Click **Create**
     - Choose GitHub and authorize
     - Choose your repo and branch
     - Select **"Custom"** build preset
     - Provide:
       - **App location**: / (root)
       - **Output location**: / (or leave blank)
   - Click **Review + Create**
3. **Azure generates GitHub Action automatically**
   - It builds and deploys your app on push
4. **Access Static Web App URL**
5. https://<auto-generated-name>.azurestaticapps.net/Home.html

---

Required Files for Azure Static Web Apps

Optional (for customization, not mandatory):

- .github/workflows/azure-static-web-apps.yml: Auto-created by Azure on setup.
- You don't need appsettings.json, buildspec.yml, etc., unless doing a dynamic app.

Tips

- Rename Home.html to index.html if you want it to open by default.
- Keep image and asset paths relative (./images/img.jpg) to avoid broken links.
- Azure Static Web Apps is ideal for static HTML/CSS apps – faster, cheaper, and auto-deploys.

Summary Table

Deployment Type	Requires GitHub	Command-line Deploy	Good for Static	Custom Backend Support
Azure App Service	✗	✓	✓	✓ (e.g., Node, Java)
Azure Static Web App	✓	✗ (via GitHub only)	✓ ✓ ✓	✗ (Static only)
