Here is a categorized table of **all essential Docker commands** with their **uses**:

---

1. Docker Image Commands

Command	Use
docker build	Builds an image from a Dockerfile
docker pull	Downloads an image from a registry (like Docker Hub)
docker push	Uploads an image to a registry
docker images	Lists all local images
docker rmi	Removes one or more images
docker tag	Tags an image with a new name
docker save	Saves an image to a tar archive
docker load	Loads an image from a tar archive
docker import	Imports a filesystem as a Docker image
docker export	Exports a container's filesystem as a tar archive
docker history	Shows history of an image (layers, commands used)
docker inspect <image>	Shows detailed info about an image

---

2. Docker Container Commands

Command	Use
docker run	Runs a container from an image
docker start	Starts an existing stopped container
docker stop	Stops a running container
docker restart	Restarts a container
docker pause	Pauses processes in a container

docker unpause	Unpauses a container
docker kill	Kills a running container immediately
docker rm	Removes one or more containers
docker ps	Lists running containers (-a shows all)
docker exec	Runs a command in a running container
docker attach	Attaches to a running container (stdin/stdout)
docker logs	Fetches logs from a container
docker inspect <container>	Shows detailed info about a container
docker rename	Renames a container
docker update	Updates container resource limits
docker wait	Blocks until container stops, returns exit code
docker cp	Copies files/folders between host and container
docker diff	Shows changes to container's filesystem
docker stats	Displays real-time usage statistics of containers
docker top	Displays running processes in a container

---

3. Docker Volume Commands

Command	**Use**
docker volume create	Creates a volume
docker volume ls	Lists volumes
docker volume inspect	Shows detailed info about a volume
docker volume rm	Removes a volume
docker volume prune	Removes unused volumes

---

4. Docker Network Commands

Command	Use
docker network create	Creates a new network
docker network ls	Lists all networks
docker network inspect	Shows detailed info about a network
docker network connect	Connects a container to a network
docker network disconnect	Disconnects a container from a network
docker network rm	Deletes a network
docker network prune	Removes unused networks

---

5. Docker System Commands

Command	Use
docker info	Displays system-wide Docker information
docker version	Shows Docker client and server version
docker system df	Shows disk usage
docker system prune	Removes unused data (containers, images, volumes, networks)

---

6. Docker Compose (Optional Add-on Tool)

Command	Use
docker-compose up	Starts services defined in docker-compose.yml
docker-compose down	Stops and removes containers, networks, volumes
docker-compose build	Builds images defined in docker-compose.yml
docker-compose logs	Views logs for all services
docker-compose ps	Lists containers managed by Compose

docker-compose exec	Executes command in running container
docker-compose config	Validates and displays the Compose file

---
