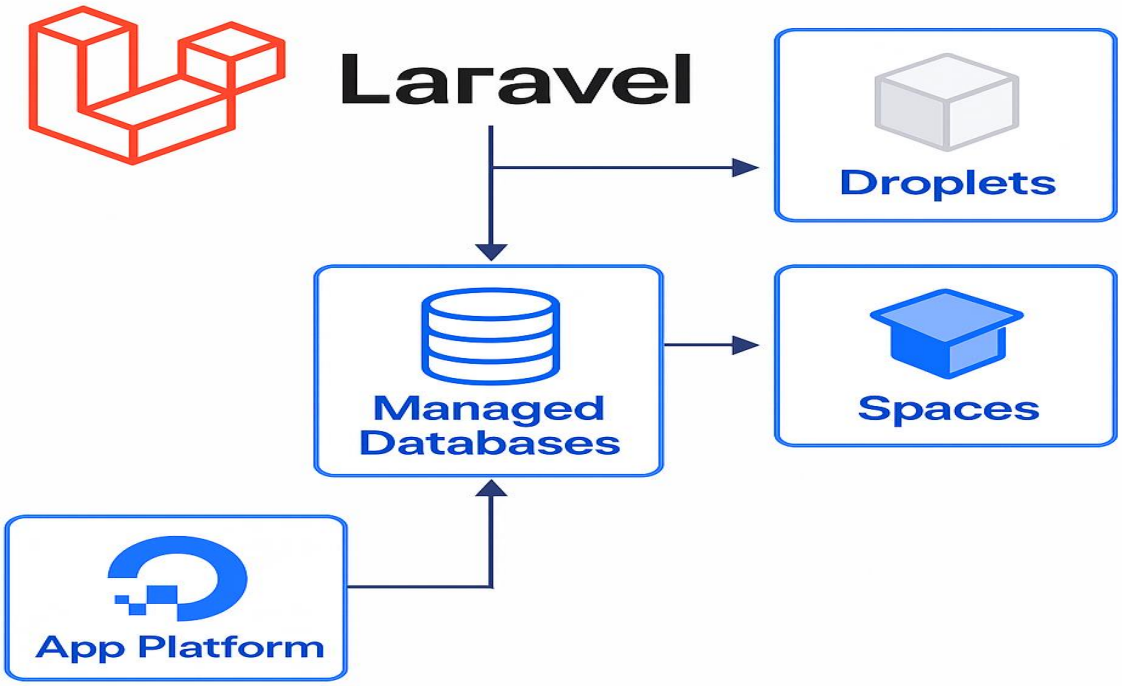
Here's a detailed comparison table showing **similar services in Laravel and DigitalOcean**, mapped to their **AWS equivalents**, categorized by functionality:

Category	AWS Services	Laravel Equivalent	DigitalOcean Equivalent	Use Case
1. Compute Services	EC2	Laravel Forge (provisioning servers)	Droplets	Host and run Laravel applications
2. Storage Services	S3	Laravel Filesystem (Flysystem with S3 driver)	Spaces (Object Storage)	Store images, backups, or any static assets
3. Database Services	RDS, DynamoDB	Laravel Eloquent ORM, DB Migrations	Managed Databases (MySQL, PostgreSQL, Redis, MongoDB)	Manage data using Laravel models and hosted DB
4. Networking Services	VPC, Direct Connect	Laravel Valet (local networking), Route bindings	VPC, Cloud Firewall, Floating IPs	Secure and control network access
5. Serverless Compute	Lambda, API Gateway	Laravel Vapor (serverless platform for Laravel)	App Platform (with Functions support)	Deploy Laravel apps serverlessly
6. Container Services	ECS, EKS	Laravel Sail (Docker-based dev env), Laravel Vapor	App Platform (Docker container deployment)	Containerized Laravel app deployment
7. IAM	IAM	Laravel Sanctum, Laravel Passport	IAM via Teams & API Token Management	Authentication and API security
8. Monitoring & Logging	CloudWatch, CloudTrail	Laravel Telescope, Laravel Log Channels	Monitoring & Insights, Logging via App Platform	Debugging and performance monitoring
9. Dev & Deployment Tools	CodeCommit, CodeBuild, CodeDeploy, CodePipeline, Cloud9	Laravel Envoyer, Forge, Artisan CLI	GitHub Actions + App Platform CI/CD, or Deploy via Git	Full CI/CD deployment automation for Laravel apps

Summary of Compatibility & Integration:

Integration Area	Laravel ↔ DigitalOcean
Deploy Laravel App	Use Laravel Forge or Laravel Vapor to deploy to Droplets or App Platform
Database Connection	Configure .env with DigitalOcean Managed DB credentials
Storage	Use Laravel Filesystem with DigitalOcean Spaces driver
Monitoring	Use Laravel Telescope + DO Monitoring/Alerting
CI/CD	Use Laravel Envoyer or GitHub Actions to deploy to DO


Would you like an **architecture diagram** showing Laravel integrated with DigitalOcean services for a full-stack deployment?
