Here is a complete list of **Laravel services**, categorized into **built-in (free)** and **premium (paid)**, along with **suggested use cases** — formatted as a clean and clear table.

Laravel Services (Free & Built-in) vs Paid (Premium)

Service Name	Type	Free / Paid	Suggested Use Case
Laravel Framework	Core Framework	Free	Building web apps and APIs using MVC architecture
Eloquent ORM	ORM	Free	Working with database records using expressive syntax
Blade Template Engine	Templating	Free	Building dynamic HTML templates with PHP logic
Laravel Routing	HTTP Routing	Free	Defining routes for your application with clean syntax
Laravel Artisan	CLI Tool	Free	Automating repetitive tasks (e.g., migrations, testing, seeding)
Laravel Middleware	Request Filtering	Free	Filtering HTTP requests (e.g., auth, CSRF, logging)
Laravel Validation	Input Validation	Free	Validating user input before processing
Laravel Migrations	DB Versioning	Free	Managing schema changes across development environments
Laravel Queues	Background Jobs	Free	Handling long-running tasks like email sending, notifications
Laravel Events & Listeners	Event Handling	Free	Handling custom or system events asynchronously
Laravel Broadcasting	Real-Time Events	Free	Real-time events using WebSockets

Laravel Scheduling	Task Scheduler	Free	Automating cron jobs using a fluent API
Laravel Notifications	Multi-Channel Notify	Free	Sending notifications via mail, SMS, Slack, etc.
Laravel Passport	OAuth2 API Auth	Free	API authentication using OAuth2
Laravel Sanctum	SPA Auth	Free	API authentication for SPAs and mobile apps
Laravel Socialite	OAuth Logins	Free	Logging in users via Facebook, Google, GitHub, etc.
Laravel Breeze	Auth Starter Kit	Free	Simple authentication scaffolding for new projects
Laravel Jetstream	Auth Scaffolding	Free	Advanced user auth with team management, 2FA, sessions
Laravel UI	Auth UI Templates	Free	Frontend scaffolding with Bootstrap/Vue/React

---

Laravel Premium (Paid) Services

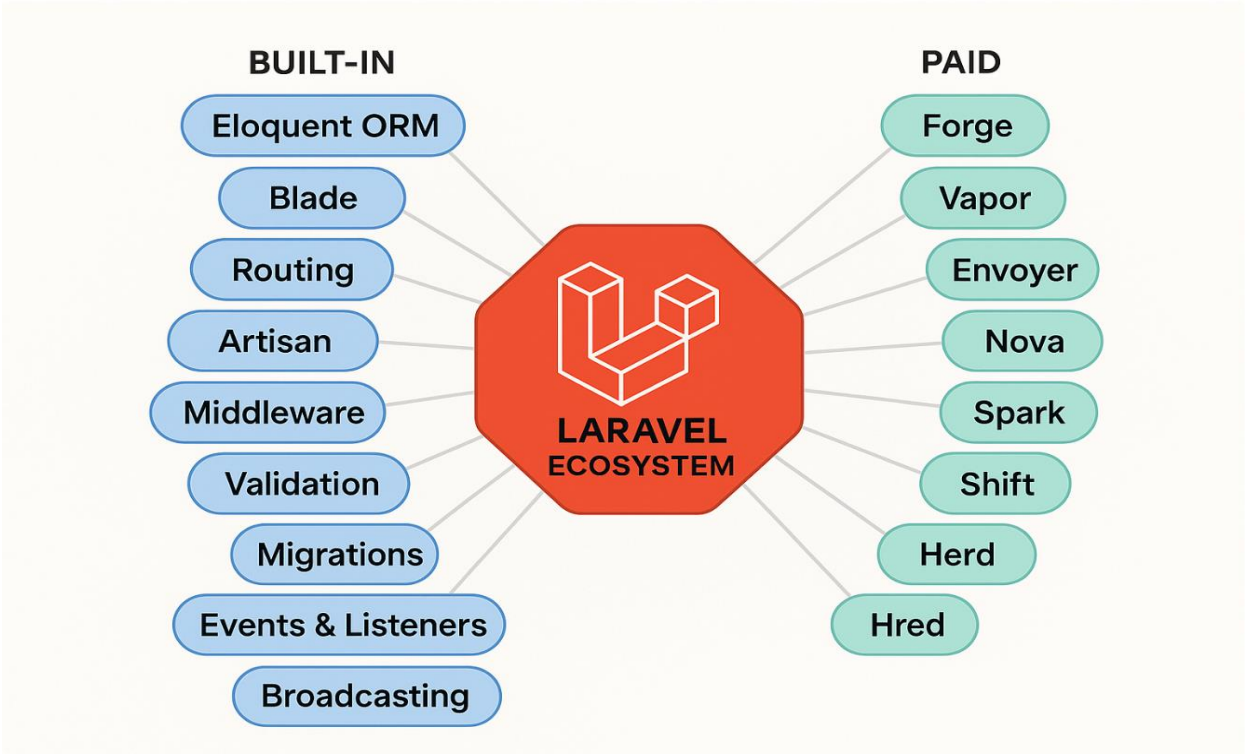
Service Name	**Type**	**Free / Paid**	**Suggested Use Case**
Laravel Forge	Server Management	Paid	Provision and deploy PHP/Laravel apps to cloud servers like DigitalOcean, AWS
Laravel Vapor	Serverless Hosting	Paid	Deploy Laravel apps on AWS Lambda serverlessly
Laravel Envoyer	Zero-Downtime Deploy	Paid	Automated deployment pipeline with zero downtime
Laravel Nova	Admin Panel Builder	Paid	Building admin dashboards quickly with GUI
Laravel Spark	SaaS Starter Kit	Paid	SaaS app boilerplate with subscription billing (Stripe)

Laravel Shift	Code Upgrade Service	Paid	Automatic Laravel version upgrades and refactoring
Laravel Herd (macOS)	Local Dev Tool	Free (Basic), Paid (Pro)	Fast native Laravel dev environment for macOS (alternative to Valet, Homestead)

Summary

- **Free Built-in Services** are powerful and cover most full-stack and API-based project needs.
- **Premium Services** are ideal for:
  - **Professional deployments**
  - **SaaS products**
  - **Team-based apps**
  - **Time-saving tools** for DevOps, serverless, or admin dashboards.

Would you like a diagram of this Laravel ecosystem or how to integrate with AWS?



Here's a step-by-step guide on how to **integrate Laravel with AWS**, including key services like **S3, RDS, SES, EC2**, and **CloudWatch**, organized by **service**, **integration steps**, and **use cases**.

Laravel + AWS Integration Table

AWS Service	Laravel Integration Method	Use Case
S3 **(Simple Storage Service)**	- Install AWS SDK: composer require aws/aws-sdk-php - Configure .env: AWS_ACCESS_KEY_ID=xxx AWS_SECRET_ACCESS_KEY=xxx AWS_DEFAULT_REGION=ap-south-1 AWS_BUCKET=my-bucket - Set FILESYSTEM_DRIVER=s3	Store files like images, PDFs, backups, etc.
RDS **(Relational Database Service)**	- In .env: DB_CONNECTION=mysql DB_HOST=your-rds-endpointDB_PORT=3306 DB_DATABASE=your_db DB_USERNAME=admin DB_PASSWORD=secret	Use AWS-managed MySQL/PostgreSQL for scalable DB
SES **(Simple Email Service)**	- In .env: MAIL_MAILER=ses MAIL_FROM_ADDRESS=noreply@yourdomain.com AWS_ACCESS_KEY_ID=xxx AWS_SECRET_ACCESS_KEY=xxx AWS_DEFAULT_REGION=ap-south-1 - Install SES SDK if needed: composer require aws/aws-sdk-php	Send transactional or marketing emails
EC2 **(Elastic Compute Cloud)**	- Host Laravel on EC2 - Use Apache/Nginx + PHP + Composer - Setup database, SSL, storage, queues as needed	Full control over Laravel hosting environment
Elastic Beanstalk	- Use Laravel Beanstalk CLI or upload via ZIP - Add .ebextensions for PHP, Composer, cron	Fully managed deployment with scalability

CloudWatch	- Install logging driver: Use laravel-loggly, or configure Monolog for CloudWatch - IAM permissions needed	Monitor logs, app errors, and performance
IAM (Identity and Access Management)	- Use IAM Roles or access keys in .env - Attach permissions for S3, SES, CloudWatch, etc.	Secure and controlled access to AWS services
SQS (Simple Queue Service)	- In .env: QUEUE_CONNECTION=sqs AWS_ACCESS_KEY_ID=xxx AWS_SECRET_ACCESS_KEY=xxx AWS_DEFAULT_REGION=ap-south-1 SQS_QUEUE=https://sqs.region.amazonaws.com/your-queue-url	Queue jobs for async processing (emails, notifications)

□ Example: Laravel File Upload to S3

```
use Illuminate\Support\Facades\Storage;

public function upload(Request $request) {
   $path = $request->file('avatar')->store('avatars', 's3');
   return Storage::disk('s3')->url($path);
}
```

AWS Permissions (Minimum)

Use IAM policies like:

```
{
  "Effect": "Allow",
  "Action": [
    "s3:*",
    "ses:SendEmail",
    "sqs:*",
    "logs:*"
  ],
  "Resource": "*"
}
```

Restrict resources as needed.

Would you like:

- Terraform or CloudFormation scripts to automate this?
- Docker-based deployment on AWS EC2?
- CI/CD pipeline with GitHub and AWS CodeDeploy?
